

# Career Journal - Software Engineer

by Davis Forsythe on November 5, 2023

## My Interest

9

## Career Description

Design and develop software that meets the continued requirements of a customer and collaborate with others on said software

## Skills Required

Logical problem solving, Communication, Collaboration, Critical thinking, UX design, Programming, Knowledge of in-use programming languages, Computational algorithms

## Education Required

Bachelor's degree (typically in computer science or software engineering), strong programming skills

## Salary and Benefits

Between 66k and 104k yearly

## Local Regional Demand

About 12% of the demand construction has, so there is demand, but not a lot (In Mississippi).

## Pros

High pay, collaborative, high national demand, good job security, potential for elevation, already something I enjoy doing

## Cons

Potentially long hours, bad "crunch culture", Extremely possible you will have to deal with customers directly

## Other

No Response
